

Andris Zalitis

Bikernieku 160k7-20G
Riga, Latvia, LV-1079

<http://zalitis.me>

Highlights

- Worked on 8 freelance iOS app development projects. Average rating by customers is 5/5.
- Has worked with American, German, Belgian, Danish, South Korean and Indian customers.
- High attention to details as noted by customers in their reviews (available on <http://zalitis.me>).
- Was contracted by Samsung Electronics to port own iOS app to Android for Samsung Apps store.

Work Experience

2010 – present, founder, SIA POLLEO

2015

- Created two well received apps for a small startup from San Francisco:
 - iOS app for scheduling get togethers with friends (simple calendaring, contacts, chat, points of interest search, map with location points, push notifications);
 - iOS app for booking appointments with professionals (advanced calendaring, contacts, chat, notes, points of interest search, push notifications, separate pro and client functionality, stripe integration for payments).

2014

- Planned the server side API and developed a Universal iOS app for a mini social network (users, posts, photos, videos, news feed, tags, search, comments, liking, messages and push notifications).

2013

- Started offering iOS app development services on elance.com. Worked on 5 small to medium projects.

2012

- Created two Android apps for Samsung Apps store. Both utilized S Pen library for drawing with a stylus. One of the apps used sketch recognition algorithms to recognize shapes: triangle, rectangle and oval.
- Was contacted by Samsung Electronics and offered a contract for porting of the sound mixing iOS app to Android to put it on Samsung Apps store. The project was tight on time, but was successfully finished within a deadline.

2012

- Created a free sound mixer (Adobe Flash) for American Tinnitus Association (was thanked in a magazine *Tinnitus Today*).
- Created website gomix.it, which added more advanced level to the website's naturesoundsfor.me functionality.

2011

- Created an iOS app for the website naturesoundsfor.me (average rating 4.5).

2010

- Created a sound mixer (Adobe Flash) for Belgian nonprofit project aifoon.org.
- Created a website naturesoundsfor.me that later became a hit on stumbleupon.com (in a nature section). It has been mentioned in lifehacker.com, makeuseof.com and BBC program Click.

2010 – 2011

- Worked as an outsourced analyst and developer of Microsoft Dynamics NAV projects. One of the projects was preparing a software design for one of top 5 Latvian building materials store chain.

2004 – 2009, Analyst / lead developer, SIA New Vision

2007 – 2009

- Lead developer, also worked as analyst in some projects (requirements analysis, software design).

2005 – 2006

- Programmed custom solutions of Microsoft Dynamics NAV.
- Developed a time tracking solution with an indexed comments section for in-house use.

2004

- Created salary calculation add-on for Microsoft Business Solutions - Navision 3.70.

2003, outsourced software developer

- Was contracted by a German company D&D GmbH to create a software suite for casino jackpot systems. This software is still used in multiple casinos, 11 years since its creation.

2000, web designer (part time job), National Library of Latvia

- Worked together with a designer and implemented some of the changes for the website of National Library of Latvia.

Personal Projects

2015

- soundsfor.me - HTML5 webapp for blocking out external noise.
- iOS shopping list app with nice 3D effects (when folding the shopping lists).

2012

- iOS app for tracking of universal data (weight, sleep, nutrition). The app indexes the entered text to make it easy to enter it the next time.
- iOS app that determines the carrier operator of a cell phone number (uses web scraping).

2009

- Developed a Firefox plugin that helped to win in a penny auction system. The plugin monitored total amount of money spent by other players, auto-placed the bids and indicated the strategy type of the other players.

2005

- Developed Java ME mobile game – Russian Checkers. Signed contract to sell it through largest Latvian mobile app seller at that time - www.one.lv.

2004

- Developed Java applet for Russian Checkers (unbeatable by casual players)

2003

- Developed Delphi application of Russian Checkers (player vs player / player vs computer). The AI was strong enough to win one of the world's top-30 Russian Checkers players if playing with equal time for computer and a man.

Technical Skills

Objective C, Swift, Java, Android, JavaScript, HTML, PHP, SQL, Git, Delphi, C/AL, Actionscript, Adobe Photoshop
